<b>LEGEND</b>  Indicates the best time to perform this lawn care activity for optimal results  Indicates acceptable time to perform this lawn care activity  Indicates acceptable time to perform Post-Emergent  Indicates the best time to perform Pre-Emergent for optimal results								
<p>* Pre-emergent herbicides are applied before crabgrass seedlings have emerged from the ground. (Could be as early as March.) Do not apply if you have seeded. Post-emergence herbicides are applied to the visible crabgrass plants and should be applied when crabgrass plants are small.</p>								

All times are subject to weather, and are examples for planning purposes only.
